

ERC Project's presentation

Material Minds. Exploring the Interactions between Predictive Brains, Cultural Artefacts, and Embodied Visual Search (XSCAPE)

XSCAPE Project (ERC-2020-SyG 951631) aims to account for some specific but ambitious research questions: Do the worlds we build alter our minds and the way we process information? Is it possible that the material structures of our settlements, buildings, and artefacts actively change our patterns of thought and attention? Does understanding the changes in material codes throughout history allow us to understand the emergence and evolution of the human mind and rationality of the human species?

Project PIs:

Felipe Criado-Boado, Instituto de Ciencias del Patrimonio (INCIPIIT-CSIC)

Andy Clark, School of Media, Arts and Humanities, University of Sussex

Luis M. Martínez, Instituto de Neurociencias-CSIC/ Universidad Miguel Hernández

Johannes Müller, Institut für Ur- und Frühgeschichte, Christian-Albrechts-Universität zu Kiel
